— FOR 3PL OPERATIONS

The 3PL labor shortage hits hardest where *automation hasn't reached*.

Kitting, returns, repacking: your highest-turnover stations are also the ones that existing automation can't help with. The work is too varied, the volumes too small, and the integration windows too long. So the bottleneck stays manual, and the labor math gets worse every quarter.

THE GAP

Existing automation skipped this work for a reason.

Fixed cells need months of programming per SKU. Per-item volumes are too low to amortize. The math has never worked — until now.

WHAT DEPLOY BUILDS

Generalist robots that learn your work the way a person does, by being shown.

Foundation-model-driven robots for the high-mix work that fixed automation can't reach. Show it once, it runs.

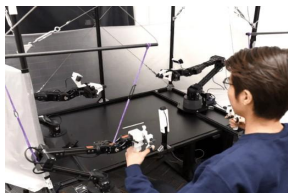

● HOW A DEPLOY ROBOT EARNS ITS PLACE ON YOUR FLOOR

01 • DEPLOY

On-site, fast.

We install at your station. Days, not months.

02 • HUMAN ON LOOP

Teleop covers edge cases.

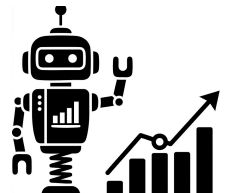

Remote operators step in instantly when needed. The line never stops.

03 • WORK GETS DONE

Throughput, not promises.

Kits packed, returns triaged. Measured against agreed SLAs.

04 • ROBOT IMPROVES

Every shift, smarter.

Each intervention becomes training data. Month six outperforms month one.

Tell us how you're solving this today.

If you've found something that works for the high-mix work, we want to hear it. If you haven't — we'd love to help.
